BACKGROUND AND SCOPE

Plant diseases are playing a vital role in Indian Agriculture by reducing production and quality of important crops. As agricultural production intensified over the past few decades, producers have become more dependent on agro-chemicals as a relatively reliable method of crop protection. Increasing use of chemicals caused several negative effects i.e. development of pathogen resistance, affecting soil health and environmental hazard. With changing climatic scenario in recent years, several minor pathogens and new pathogens are emerging, which needs the proper diagnosis and their judicious managements in important crops to enhanced productivity. Integrated disease management is thus being considered to reduce the use of

chemicals in agriculture. Now, a multi-disciplinary approach is needed related to plant protection management strategies in changing climate scenario.

THEME

Climate change, diagnosis and plant disease development, role of biotechnology, disease management.

VENUE

Narendra Deva University of Agriculture & Technology, Kumarganj is located 42 Km away from Faizabad on Faizabad-Raebareilly road and 25 Km from Jagdishpur. Jagdishpur is situated 85 Km. away from Lucknow on Lucknow-Sultanpur highway, has frequent bus services from Alambagh, Lucknow.
